## *apollon*

### *The strongest hearing aid in the world!*

An elegant accessory that adapts to its owner's individual requirements in the blink of an eye. With **apollon**, BHM is deliberately defying the trend to make hearing devices ever smaller and more fiddly. This all-rounder combines a stylish, modern design with a virtually universal range of possible applications – and it is very easy to use.

**apollon** can be used as a situation-related hearing aid, as well as a high-performance aid that can be adapted for both air and bone conduction.

### *The freedom of hearing*

The core of **apollon** is a latest-generation multi-channel audio processor that can be adapted via special software by your doctor or hearing aid specialist to suit your personal hearing requirements. When this happens, **apollon** proves beyond

## **apollon**

any doubt the scope of its individual action! Furthermore, the large operating elements – ergonomic volume control, an on/off switch as well as a handy visual battery warning – enable young children or disabled people to operate their **apollon** themselves.

### *Practically audible!*

**apollon** effortlessly meets all the demands made of a high-performance hearing device. It is the ideal companion wherever

you go – at the theatre, at church or visiting a fair – thanks to its inductive signal. This appealing hearing aid also features a number of other useful extras: **apollon** can be combined with MP3 players as well as wireless and Bluetooth systems or external microphones, requiring no additional adaption to do so. The user-friendly device is also fitted with a practical shirt clip and can therefore be attached quite easily to your shirt pocket, belt or even lanyard. The extra robust device thus provides maximum hands-free benefits at work or at school, at home or when travelling.

### *Advantages at a glance*

- Appealing design and easy to use thanks to larger operating elements
- Robust and suitable for daily use, with practical shirt clip
- Digitally programmable and option to connect to MP3, wireless and Bluetooth systems
- Meets a wide range of hearing requirements in a variety of situations, to high-performance hearing device
- Inductive signal for visits to museums, theatres and churches
- can be used for air or bone conduction, monaurally or binaurally
